The **Sudoku Worksheet** organizes your work.

1. Enter the Givens in the correct squares.
2. Scan the array and make any new entries that are obvious to you.
For each known entry:
 - a. Use the listing of 1-9 for that row, and mark off the digit of that entry.
 - b. Use the listing of 1-9 for that column, and mark off the digit of that entry.
 - c. Use the listing of 1-9 for that box, and mark off the digit of that entry.
3. As each new entry is deduced, upgrade your information base using the same procedure.
4. If you stay organized, there is never a need to guess with a Sudoku Puzzle.
All new entries can be absolutely deduced from your organized information.
